| Assignment No.   | 1                |  |
|------------------|------------------|--|
| Name             | Rheno Victor B   |  |
| Registration No. | 962219104087     |  |
| Team No.         | PNT2022TMID34680 |  |

#### Question-1:

Create registration page in html with username, email, and phone number and by using POST method display it in next html page.

### index.html

```
<!DOCTYPE html>
<html>
     <head>
          <meta charset="utf-8">
          <meta name="viewport" content="width=device-width, initial-</pre>
scale=1">
          <title>Registration</title>
          <link rel="stylesheet" href="{{</pre>
url for('static',filename='styles/index.css') }}">
     </head>
     <body>
          <center>
          <br><br><br>>
          <h1>Registration</h1><br>
          <form action="{{ url for('result') }}" method="post">
               <label>Name</label>
                         : <input type="text" class="name-input
name mb-3" id="name" name="name">
                         <label>Email</label>
                         : <input type="email" class="name-
input name mb-3" id="email" name="email">
```

```
<label>Mobile</label>
                          : <input type="number" class="name-
input name mb-3" id="mobile" name="mobile">
                          </t.r>
                <br><br><br>></pr>
                <input class="btn btn-outline-primary" type="submit"</pre>
value="Submit">
          </form>
          </center>
     </body>
</html>
result.html
<!DOCTYPE html>
<html>
     <head>
          <meta charset="utf-8">
          <meta name="viewport" content="width=device-width, initial-</pre>

    mobile = request.form.get('mobile')
    return render template('result.html', name=name, email=email,
mobile=mobile)
if name == " main ":
    app.run(debug=True, port=2807)
```

## OUTPUT:

# **REGISTRATION**

Name : abc

Email : abc@gmail.com

Mobile: 9876543210

(Submit)

# WELCOME !!!

Name: abc

Email: abc@gmail.com

Mobile: 9876543210

## **Question-2:**

Develop a Flask program which should contain at least 5 packages used from pypi.org

```
#1. NUMPY
import numpy as np
arr = np.array([[-1, 2, 0, 4],
                 [4, -0.5, 6, 0],
                 [2.6, 0, 7, 8],
                 [3, -7, 4, 2.0]])
print("Initial Array: ")
print(arr)
Initial Array:
[[-1. 2.
             0.
                   4. ]
 [ 4. -0.5
                   0. 1
             6.
 [ 2.6 0.
                   8. 1
             7.
 [ 3.
       -7.
             4.
                   2. 11
#2. PANDAS
import pandas as pd
s1 = pd.Series([1, 3, 4, 5, 6, 2, 9])
s2 = pd.Series([1.1, 3.5, 4.7, 5.8, 2.9, 9.3])
s3 = pd.Series(['a', 'b', 'c', 'd', 'e'])
Data ={'first':s1, 'second':s2, 'third':s3}
df = pd.read csv('/content/sample data/ds salaries.csv')
